

INSTRUCTIONS

Patent Applied For

Thank you for using the Little Hose Monster™.

Before using please read the instructions completely and contact us if there are any questions. The purpose of the Little Hose Monster is to measure flow rate and to diffuse and divert discharge water in fire pump testing, fire flow testing and main flushing. The Little Hose Monster can only be used with the Pitotless Nozzle™ or the Flushing Nozzle. No other equipment is compatible with it. To measure flow rate, use the Pitotless Nozzle. If flow rate measurement is not necessary, use the Flushing Nozzle.

SETUP *No tools necessary*

Insert the Pitotless Nozzle™ or Flushing Nozzle

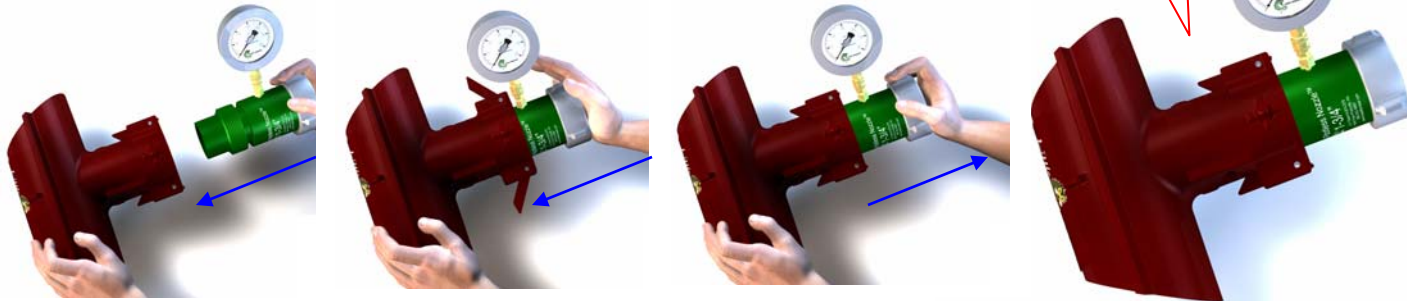

The Pitotless Nozzle or the Flushing Nozzle is attached by inserting the nozzle outlet into the inlet of the Little Hose Monster. Push it in *as far as it will go** and then back it out until the two spring loaded latch-levers snap into place. The latch-levers will be parallel to the Little Hose Monster body when they are in position.

When the nozzle is installed, securely attach a hose using a spanner wrench.

**As far as it will go:*

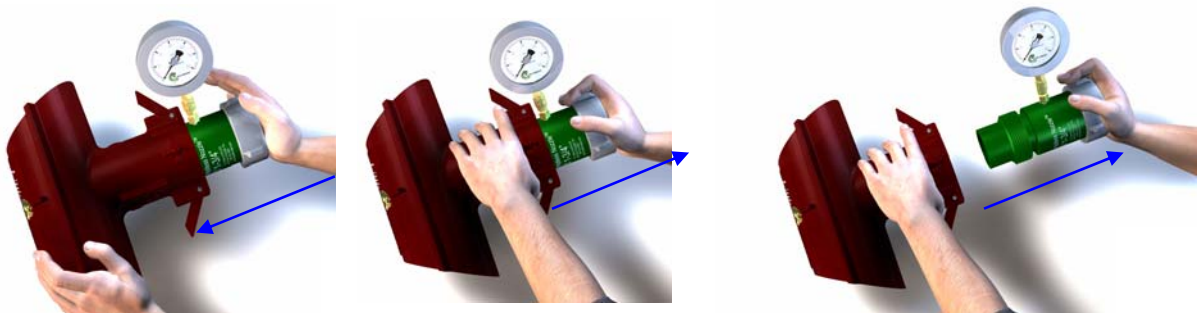

The Pitotless Nozzle – the gauge port fitting stops against the inlet.

The Flushing Nozzle – the swivel coupling stops against the inlet.

Remove the Pitotless Nozzle or Flushing Nozzle

Push the Nozzle in to the Little Hose Monster. The latch-levers will open up and be at approximately 45° off the body of the Little Hose Monster and un-hook from the groove on the Nozzle. Hold both latch-levers out and slide the nozzle completely out.

Go to www.HoseMonster.com and click on The Little Hose Monster to see a video of installation procedure.

WARNING

- Use with Pitotless Nozzle or Flushing Nozzle only.
- Verify that Nozzle is installed correctly. Both latch-lever arms must be parallel to body and hooked into groove in Nozzle body.
- Check hose and connections for safety.
- Use only equipment in good condition.
