

SludgePro™

Thank you for choosing the SludgePro™ sampler from Pollardwater.com featuring a superior design that eliminates the rivets used by other samplers, which can actually crack the fitting and tube.

All body components are Polycarbonate (similar to Lexan®) so this sampler will flex instead of breaking like inferior materials used by the competition. The unit comes with tape strips at 1 foot increments so you can calculate the depth of the tank and its sludge blanket.

For easy reading, numbers 1 thru 4 appear on the strips on the bottom section from the factory. A Tape Strip Package with numbers 1 thru 14 is included, and we offer the tape strip package as a separate item for marking replacement sections.

SludgePro™ Models

SP15: Complete SludgePro™ 15 foot Sampler

SP15KIT: SludgePro™ 15 ft Sampler with Brush and Case

Up to two middle sections may be added to produce either a 20 foot or 25 foot sampler.

SludgePro™ Components

SP15TOP: Top Section, Rope Handle with plain Tape Strips

SP15MIDDLE: Middle Section with plain Tape Strips

SP15BOTTOM: Bottom Section with Ball Check Valve with 1 thru 4 foot numbered Tape Strips

SPTAPE: Tape Strip Package with 1 thru 14 foot strips on Label Backing Sheet

SPCASE: SludgePro™ Case

L1501513: Cleaning Brush

INSTRUCTIONS

1. Slowly push the SludgePro™ to the bottom of the tank allowing fluid to fill the sampler. Plunging the unit in to the sludge blanket may clog the inlet....a slow fill is desirable.
2. Once filled, a quick tug on the Rope Handle will seat the valve.
3. Lift the SludgePro™ sampler as vertical as possible to avoid bending the clear tubing. Although the Polycarbonate material is flexible the weight of the sample can cause damage to the unit if raised horizontally.
4. Clean the unit with soapy water and the Cleaning Brush.

Additional Sampling Products

YSI ProODO™ Optical Dissolved Oxygen Meter

- New optical technology from YSI
- Low maintenance - no more membranes or fill solution
- “Smart” sensor stores calibration in the probe
- Ideal for field and lab measurements (*fits in 300 mL BOD bottle*)

Get the best of both worlds – the quality and durability you come to expect from YSI with the latest optical dissolved oxygen monitoring technology. Optical dissolved oxygen technology has proven more accurate and eliminates many of the hassles of traditional Clark Cell technology including interference from H₂S.

With no membranes or fill solution to change, you will spend fewer hours maintaining and calibrating your dissolved oxygen probe.

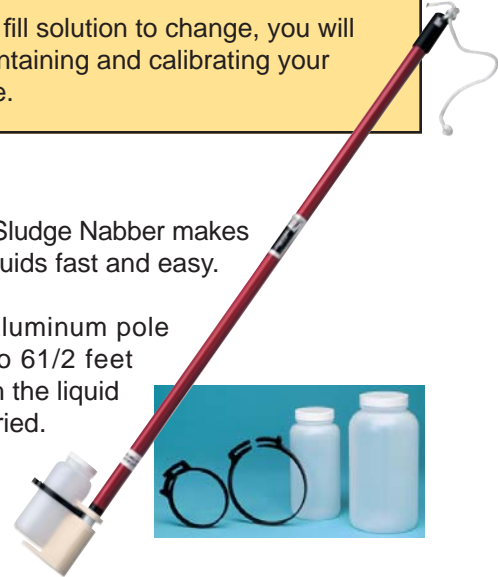

**Sludge Nabber
L1503 Series Grab Sampler**

The Pollardwater.com Sludge Nabber makes sample collection of liquids fast and easy.

It has an adjustable aluminum pole that extends from 4 to 61/2 feet making it easy to reach the liquid to be sampled and carried.

The Sludge Nabber is ideally suited for all sampling requirements.

Whirl-Pak Bags with Sodium ThioSulfate

Thio Bag is EPA approved with new Stand-Up Models.

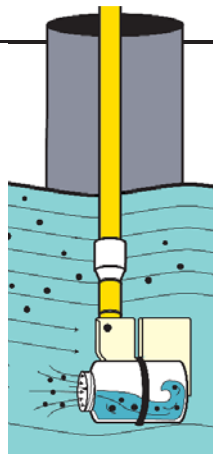

Pre-sterilized, single use bags save time, cost and space.

Specially designed for sampling chlorinated water, the Whirl-Pak® Thio-Bag® is economical and convenient.

Swing Sampler L1504 Series

Grab Sampler with 90° Swivel Bottle Holder

Poles available in 6-12 or 8-24 foot lengths and the 90 degree swivel on the sampler makes collecting a sample easier.

Snap ring on sampling bottle can hold 500 to 1000 mL bottles.

Perfect for collecting samples from a horizontal flowing stream or sewer.
